

## Response to Intervention Made Easier with MindPlay

Response to Intervention (RTI) is on every educator's mind today. The challenge is providing research-based academic intervention early enough to effectively ensure student success.

The first step in an RTI program is to assess students to determine gaps in their abilities and then provide them with differentiated instruction to address their needs. Educators use the **Reading Analysis & Prescription System™ (RAPS 360)** to inventory student skills, diagnose needs, and monitor progress. **RAPS 360** is a fast, accurate, computer-based tool that provides ongoing diagnosis so educators can assign targeted interventions and measure their effectiveness.

**RAPS 360's** assessments, benchmark reports, diagnostic abilities, and progress monitoring allow districts to meet the many requirements of RTI. RTI requires targeted interventions given with varied duration and frequency, and the use of additional staff beyond the classroom teacher. With **RAPS 360**, student error reports, class needs reports, and class improvement reports easily document the effectiveness of each intervention.

When districts use **RAPS 360** together with other quality intervention programs like **My Reading Coach** and **FLRT – a fluent reading trainer**, the placement and progress reports provide meaningful data to measure student growth. If students have deficits in their reading abilities, they can be appropriately placed into research-based lessons and activities that build needed skills. Non-readers and emergent readers succeed with **My Reading Coach**. Students who already possess adequate decoding skills, but lack fluency, use **FLRT** to become accomplished readers. Student reports and certificates, documenting improvement and mastery, are available to share with parents. There are also support sheets to take home for additional practice.

Because MindPlay's programs are computer-based, each student works at his or her own pace on a differentiated curriculum wherever and whenever they have access to the software. The instructional software has digital coaches who deliver lessons and interact with students on phonics, orthography, syntactic processing, and comprehension. These coaches use **Teacher Infused Intelligence™** to provide targeted feedback for more than 10,000 unique situations, making true one-on-one reading instruction and intervention a reality.

With **RAPS 360**, **My Reading Coach**, and **FLRT**, schools can avoid the “wait-to-fail” method and use the “kick off success” method instead!
